

RFID For Records Management

Lexmark introduces RFID for Utilities

On a given day, thousands of documents go in and out of your company. Being able to quickly locate the files you need among the myriad of documents is vital. Lexmark's innovative RFID technology can help a company take control of their immense paper load.

The Lexmark T640rn is the first device on the market to combine RFID capability with laser printing technology, bringing your company a flexible, affordable alternative to current RFID solutions. The Lexmark solution can speed up an employee's ability to identify and retrieve documents by printing on a wide variety of different types and sizes of media, including legal-size documents.

RFID solutions are more efficient than current bar code solutions since they do not require line-of-sight reading. These solutions are quickly becoming a way for utilities to improve document management throughout their organization.

In addition to efficient form and file tracking, RFID can drastically improve your information security. Files and even forms can be linked to specific people and if an un-authorized person tries to transport the information without approval, an alert will be sent to security or a designated source. You can also now protect the IP on your PC's with Lexmark's RFID solution.

The Lexmark T640rn, when paired with Lexmark Document Distribution Suite (LDSS), offers an easy solution designed to help meet that demand that is scalable and deployable across the enterprise. This solution has the added advantage of leveraging the same device for a wide variety of applications beyond RFID tags to help consolidate devices and streamline your processes to improve productivity.
